

AI VIDEO MODELS, PAY PER USE

Higgsfield opened its catalogue as a pay-per-use API on 16 September 2026: more than 50 image and video models, one key, no subscription, billed in US dollars. Not sponsored. We make our films there.

WHERE TO START

higgsfield.ai/blog	search the blog for Higgsfield API: the announcement and how it works
higgsfield.ai	help centre, under Integrations: getting an API key
thepicantestudio.com/work	films we made this way, including Picante Burger

BEFORE EVERY GENERATION

- ☐ Check the cost first. The API and the app both let you.
- ☐ Test at 5 seconds before you run 15.
- ☐ Start from your own product photo, not from text alone.
- ☐ Design the last frame yourself if it carries text. Models garble words.
- ☐ One idea per film. Write it in one sentence first.

THE PROMPT STRUCTURE WE USE

Format line	type of film, aspect, length, the style named in two words
World and palette	the set, and every colour as a hex code with a role
The hero	the product, plus one identity anchor that must read in every shot
Motion language	how things move, and what is forbidden
Beat sheet	timestamped beats, one action each
Copy list	exact strings, nothing else appears in frame
Camera and render	allowed moves, lighting, and what must not appear
Sound	bed, foley per beat, where it stops

WHEN A SUBSCRIPTION STILL WINS

If you generate every day, a monthly plan is usually cheaper. Pay per use suits uneven months, builders and anyone comparing models before committing.
