

THE 30-POINT SITE CHECKLIST

What we check on every site we build, including our own. AI will write the pages. It will not remember these.

BEFORE YOU BUILD

- ☐ One sentence: what a visitor must do
- ☐ A page list with one job per page
- ☐ Real copy written before design
- ☐ Colours as hex, typefaces by name, logo files
- ☐ Licensed images, or your own
- ☐ Domain and a professional email

EVERY PAGE

- ☐ One clear call to action above the fold
- ☐ Works at phone width, tested on a real phone
- ☐ Text contrast you can read in sunlight
- ☐ Visible keyboard focus
- ☐ Alt text on every image
- ☐ Respects reduced-motion settings

STATES NOBODY PROMPTS FOR

- ☐ Custom 404 page
- ☐ Form error messages next to the field
- ☐ A success state after the form
- ☐ Loading states for anything slow
- ☐ Spam protection on forms
- ☐ A sticky or easy-to-reach contact on mobile

FINDABILITY

- ☐ Unique title on every page
- ☐ Meta description on every page
- ☐ Share image for link previews
- ☐ Favicon set, including phone icons
- ☐ robots.txt and sitemap.xml
- ☐ Canonical URLs and Search Console verified

TRUST AND SPEED

- ☐ Privacy page that says what you collect
- ☐ A real contact address
- ☐ Images compressed, WebP where possible
- ☐ Fonts self-hosted, lazy loading on media
- ☐ www redirects to one address, HTTPS everywhere
- ☐ Link preview checked on WhatsApp and LinkedIn
